

1.

$$\frac{x^2 - 2x - 3}{x + 4}$$

a. What value must be excluded from the domain?

$$x \neq -4$$

b. Draw a sign diagram with a dotted line at the excluded value.

$$\frac{(x-3)(x+1)}{x+4}$$

* Roots get a solid line

* Excluded values get a dotted line

plug in $-5 \rightarrow \frac{(-5-3)(-5+1)}{-5+4} \rightarrow -$

2. Draw a sign diagram for $\frac{x-2}{x+3} - 4$. (Hint: First write as a single fraction.)

$$\frac{x-2}{x+3} - \frac{4(x+3)}{x+3}$$

$$\frac{x-2 - 4x - 12}{x+3}$$

$$\frac{-3x - 14}{x+3}$$

$$-3x - 14 = 0$$

$$-3x = 14$$

$$x = -\frac{14}{3}$$

Not on the quiz

3. Solve for x : $\frac{4}{x} \geq x + 3$. (Hint: Get 0 on one side then rearrange to make a sign diagram.)

$$\frac{4}{x} - x - 3 \geq 0$$

$$\frac{4}{x} - \frac{x \cdot x}{x} - \frac{3 \cdot x}{x} \geq 0$$

$$\frac{4 - x^2 - 3x}{x} \geq 0$$

$$\frac{-x^2 - 3x + 4}{x} \geq 0$$

$$\frac{-(x^2 + 3x - 4)}{x} \geq 0$$

$$\frac{-(x+4)(x-1)}{x} \geq 0$$

$$2x + 7 \geq 5$$

$$2x \geq -2$$

$$x \geq -1$$

$$[-1, \infty)$$

$$(-\infty, -4] \cup (0, 1]$$

2F (19-2, 4 1st column)
